

MV2 (Microvalve 2)

VPI (Virtual Position Indicator)
Enables metering of abrasive
easy and precise

Internal porting promotes better
abrasive flow and extended
life of internal components

Bosses on base
make alignment
of bolt holes easy

Cleanout feature
allows removal of
obstructions
while installed on
vessel

Rebuild kit can be installed
from bottom side of valve
while mounted on vessel

Base is forged hardened
steel for long life

The MV2 has become the accepted industry leader. Components are made from durable, abrasive resistant materials and with other advanced features, the MV2 is truly state-of-the-art metering technology.

- *Pressure bypass improves abrasive flow and reliability*
- *Can be repaired without removing from the vessel*
- *Easy plunger removal and installation with standard tools*

All of these features and more allow the operator to precisely meter the abrasive flow rate, saving both time and money!
